1. Background on ABMI

The Alberta Biodiversity Monitoring Institute (ABMI) was initiated in 1997 through a broad partnership of industry, government and academia. ABMI is tasked with providing an effective way to track status and change to biodiversity at regional and provincial scales, and provide relevant and objective information to policy makers, scientists and the general public.

The institute collects information on thousands of terrestrial and aquatic species (mammals, birds, fish, invertebrates, vascular plants, lichens, moss, and fungi) and habitat structures at 1656 sites spaced systematically on a 20-kilometre grid across the entire province. Each of the 1656 sites is sampled once every 5 years using a set of scientifically reviewed protocols. This standardized data collection is designed to reduce duplication and increase cost efficiency for provincial and regional monitoring commitments, and provide a more complete understanding of cumulative impacts on the environment from multiple industries and human activities.

One of the main goals of the institute is to provide scientifically valid indices of biodiversity intactness for regions within the province and for the entire province of Alberta. These indices identify how the state of biodiversity (defined as individual species and species groups) has changed in comparison to a pre-determined reference condition. All ABMI data (raw species data plus summarized indices) will be freely available to everyone through the institutes' website.

This document will focus on the detailing the species groups (guilds) which ABMI uses to aggregate together data on the status of individual species. At present we present the guild definition and species lists for mammals, birds, herptiles, vascular plants and lichens. As work progresses, we will add additional taxa to this document (including moss, fungi, aquatic invertebrates, springtails, and mites). A companion document (ABMI 2008) details the statistical methods for development intactness indices for individual species.

1.1 Information Pyramids

Monitoring biodiversity results in information for thousands of species (Boyd and Murray 2001). This wealth of information leads to difficulty in communicating with public, resource managers, and policy makers (Cash et al. 2002). To improve management it is necessary to develop integrated measures of biodiversity. Overton et al. (2002) proposed Information Pyramids as a framework for aggregating and simplifying ecological knowledge (Fig 1). In this system, information is integrated into fewer and fewer groups as one moves up the pyramid. Each level of the pyramid is expected to be relevant to different stakeholders. For example, scientists might be interested in Level 2 to understand species population trends, while resource managers might be interested in the status of sensitive guilds (i.e. cavity nesters).

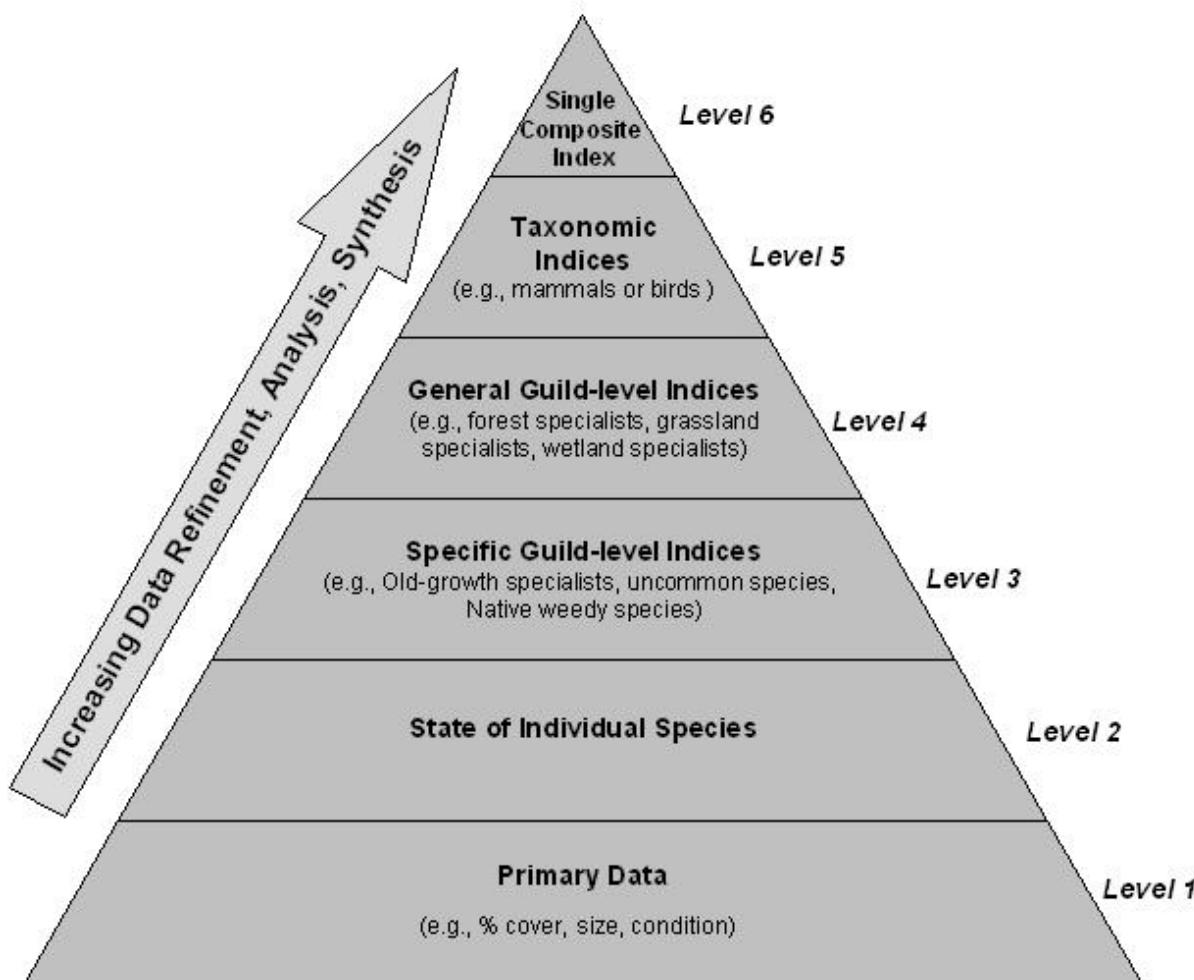

Figure 1. Alberta Biodiversity Monitoring Institute’s pyramid schematic for integrating biodiversity indices. Indices can be calculated for any of the levels except primary data (Level1).

Using Information Pyramids as a conceptual framework, ABMI has developed an innovative multimetric approach for aggregating and communicating ecological data (Fig 1). Pyramids have high intuitive appeal to both ecologists and decision-makers because they make it easy to communicate and understand the type of data being evaluated, how it is organized, and how it is being combined. Pyramids demonstrate a bottom up design, where the upper levels of the pyramid are based on lower levels, and their application is not tied to a particular spatial scale or level of biological organization.

1.2. Information Pyramid Principles

Overton et al. (2002) originally outlined four central principals to guide the aggregation and disaggregation of knowledge using Information Pyramids:

1. higher levels of information are entirely derived from an underlying foundation of primary data,

2. the processes of generalization and integration upward, and disaggregation downward must be scientifically rigorous and assumptions explicit (i.e., there should be complete access to the statistical methods, the data, and the assumptions that were used to conduct the aggregation),
3. information tools that are developed for different purposes often share common data and data aggregation methodologies, and
4. communication tools arising from Information Pyramids will benefit from the simultaneous development of all levels in the pyramid.

To these we add:

5. data used in information pyramids must be scientifically sound,
6. communication tools arising from Information Pyramids must be easily interpretable and meet the specific needs of decision makers,
7. aggregation methods must be robust to minor inconsistencies in data quality and quantity, and
8. communication tools arising from Information Pyramids should provide causal or correlative insight between change in biodiversity and environmental stressors; Decision-makers depend on causal or correlative relationships for making informed decisions.

1.3 Species Pyramid Framework

The Species Pyramid described in this report contains 6 levels. The upper levels (3–6) are designed to communicate the state of species groups to politicians, policy makers, managers, and the public. The lower levels (1 & 2) are expected to be of interest primarily to scientists and ENGO's for conducting original analysis, or for evaluating species-level trends. The top level of the pyramid (level 6) is a composite index of many taxonomic groups which follow the same pyramid framework. The six levels are described below:

Level 1: contains raw data (e.g., number, size, condition, or location) and forms the foundation for all subsequent data analyses in the species.

Level 2: describes the state of individual species or their reporting equivalent (e.g., subspecies or genera). Level 2 aggregates information from Level 1 into a single metric (*SI*) describing the state of a species. Species indices developed in level 2 form the building-blocks for indices in levels 3, 4, and 5. See ABMI 2008 for details and statistical methods used for determining species intactness indices.

Level 3: describes the state of a group of species that share a common characteristic (e.g., habitat, behavioural, or life-history). At level 3 in the pyramid, species can reside in none, one, or more than one guild.

Level 4: describes the state of a group of species that share a common habitat type (e.g., forests, grasslands, rivers, or wetlands). Guilds in this level also include “habitat generalists” (species common to two or more habitat types) and “non-native species”. Level 4 draws directly from level 2 indices. At level 4 in the pyramid, species can only reside in a single guild.

Level 5: describes the state of a species from a particular taxa (e.g., Division, Class, Order, or Family). Level 5 of the pyramid draws directly from indices developed in level 2.

Level 6: this is a single index that describes the state of many species from more than one taxonomic group. Level 6 aggregates indices developed in level 5 (i.e. combining composite index for the state of all bird, mammals, mosses, lichens, vascular plants, and fungi). We use the average state of level 5 indices rather than taking the average of all species indices in level 2 to ensure that particularly species-rich taxonomic categories do not disproportionately influence level 6 indices.

2. General Overview of the ABMI Species Pyramid

2.1 Identifying Species Indicator Groups

At level 5 of the Species Pyramid, taxonomic groups form the basis for presenting information. Here we follow common taxonomic classification schemes such as those available through NatureServe, the Integrated Taxonomic Information System, and the United States Department of Agriculture Plants Database.

“Guilds” form the basis for presenting information at levels 4 and 3 in the Species Pyramid. As used here, species guilds have a broader definition than originally outlined by Root (1967). We use the term to describe any species group that has relevance to sustainable resource decision-making. For example, species guilds need not be confined to groups of species that exploit environmental resources in a similar way or that have similar foraging strategies. Species guilds can also be built for endemic or non-native species, species commonly exploited by humans, or rare species. The critical criteria for establishing a guild are that they follow the 8 principles that guide data aggregation in Information Pyramids (above).

Objective methods for determining guild membership are uncommon and inconsistent. Where practical in the ABMI, we use objective methods to establish guild membership. In the absence of objective methods, the process of establishing guild membership remains transparent, repeatable and defendable.

2.2 Guild Development

The ABMI seeks to continually improve the methodology used to assign species to guilds. To indicate the status of guild development, we have created 4 categories:

Status 1 — Preliminary guild categories have been identified and are awaiting species assignments.

Status 2 — Species have been assigned to guilds. The process of assigning species to guilds is largely based on the review of field guide books, reference guides, primary literature, and floras.

Status 3 — The assignment of species to guilds has been independently reviewed by third-party experts.

Status 4 — Guilds have been verified using quantitative analyses.

3. Species Pyramid

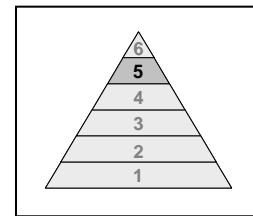

3.1 Level 6

Level 6 of the Terrestrial Species Pyramid is composite indicator of 2 or more of the 16 major taxonomic groups identified in Level 5. Level 6 Indices are calculated directly from Level 5 and each taxonomic group has equal weighting.

3.2 Level 5

Level 5 of the ABMI's Species Pyramid is designed to communicate the state of species that share a common taxonomic relationship. The ability to assess the state of any particular taxonomic group depends on the availability of species-level information. The ABMI will report on the status of any taxonomic level of organization that contains 5 or more species.

The major taxonomic groups examined are listed below with the senior uniting taxonomic level of organization shown in brackets. Where the most senior level of organization supersedes Class, appropriate ABMI Classes are also identified.

3.2.1 Taxonomic Groups Examined using Terrestrial Protocols

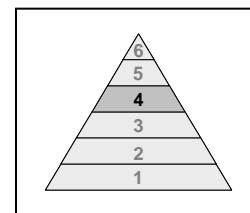

1. Mammals (Infraclass — Eutheria)
2. Birds (Class — Aves)
3. Vascular Plants (Subkingdom — Tracheobionta; Classes — Pinopsida, Magnoliopsida, Liliopsida, Equisetopsida, Filicopsida, and Lycopodiopsida)
4. Lichens (Class — Ascomycetes)
5. Bryophytes (Division — Bryophyta; Classes — Bryopsida, Sphagnopsida, Hepatopsida)
6. Polyporous Fungi (Class — Basidiomycetes)
7. Springtails (Order — Collembola)
8. Mites (Subclass — Acarina)

3.2.2 Taxonomic Groups Examined using Aquatic Protocols

9. Birds (Class — Aves)
10. Fish (Class — Osteichthyes)
11. Vascular Plants (Subkingdom — Tracheobionta; Classes — Pinopsida, Magnoliopsida, Liliopsida, Equisetopsida, Filicopsida, and Lycopodiopsida)
12. Benthic Macroinvertebrates (Classes — Insecta, Arachnida, Branchiopoda, Maxillopoda, and Ostracoda.
13. Diatoms (Classes — Bacillariophyceae, Coscinodiscophyceae, and Fragilarophyceae)
14. Water Column Macroinvertebrates (Classes — Insecta, Arachnida, Malacostraca, Maxillopoda, Gastropoda, Ostracoda, and Branchiopoda).
15. Phytoplankton (Classes — Cyanophyceae, Chlorophyceae, Cryptophyceae).
16. Zooplankton (Classes — Eurotatoria, Maxillopoda, Branchiopoda)

3.3 Level 4

Level 4 of the ABMI's species pyramid is designed to communicate the state of species that share an association with a major habitat type in Alberta. Each of the ABMI's 16 taxonomic groups (see **5.2 Level 5**) is divided into broad habitat guilds (Broad Guilds). Taxonomic groups monitored using terrestrial protocols are divided into 7-10 Broad Guilds. Within a taxonomic group, species can only be included in one of the Broad Guilds but do not need to be included in any of the guilds. With the exception of the Non-native Species guild, all Level 4 guilds are composed of native species only. At present we present the guild definitions and species lists only for mammals, birds, herptiles, vascular plants, bryophytes and lichens, but more groups for Level 5 above will be added as

work progresses. Seven guilds are tracked for vertebrates and lichens, 8 for bryophytes, and 10 for vascular plants.

3.3.1 Broad Guilds — Vertebrates & Lichens

1. **Forest Species** — species that depend on forests for living/reproduction and have higher densities in forest than in other vegetation types. For the species list for [Mammals](#), [Birds](#), [Herptiles](#), and [Lichens](#) follow the hyperlinks.
2. **Grassland/Meadow Species** — species that depend on non-alpine upland terrestrial habitat dominated by vegetation <1 m in height for living/reproduction during the breeding season and have higher densities in “grassland” than in other vegetation types. For the species list for [Mammals](#), [Birds](#), [Herptiles](#), and [Lichens](#) follow the hyperlinks.
3. **Alpine Species** — species that depend on alpine habitat (as defined by Beckingham and Archibald 1996) for living/reproduction during the breeding season and have higher densities in alpine than in other vegetation types. For the species list for [Mammals](#), [Birds](#), [Herptiles](#), and [Lichens](#) follow the hyperlinks.
4. **Peatland Species** — species that depend on peatland bogs and fens (as defined by Beckingham and Archibald 1996) for living/reproduction during the breeding season and have higher densities in peatlands than in other habitat types. For the species list for [Mammals](#), [Birds](#), [Herptiles](#), and [Lichens](#) follow the hyperlinks.
5. **Wetland/Aquatic Species** — species that depend on wetlands (defined marshes, ponds, and sloughs — Beckingham and Archibald 1996) for living/reproduction during the breeding season and have higher densities in wetlands than in other habitat types. For the species list for [Mammals](#), [Birds](#), [Herptiles](#), and [Lichens](#) follow the hyperlinks.
6. **Terrestrial Habitat Generalist Species** — species that do not have a clear habitat type with maximum density during the breeding season, and that have relatively high density in at least 2 of the previous 4 habitat categories. For the species list for [Mammals](#), [Birds](#), [Herptiles](#), and [Lichens](#) follow the hyperlinks
7. **Non-Native Species** — species that did not live/breed in the natural region prior to European settlement (Codes: 0=species native to the natural region, 1=species not native to North America prior to European settlement, and 9=species not native to Alberta but native to North America prior to European settlement (e.g., the Eastern gray squirrel)). For the species list for [Mammals](#), [Birds](#), [Herptiles](#), and [Lichens](#) follow the hyperlinks

3.3.2 Broad Guilds — Vascular Plants

1. **Forest Species[†]** — species that depend on forests for living/reproduction and have higher densities in forest than in other vegetation types. For the species list for [Vascular Plants](#) follow the hyperlinks.
2. **Grassland/Meadow Species** — species that depend on non-alpine upland terrestrial habitat dominated by vegetation <1 m in height for living/reproduction during the breeding season and have higher densities in “grassland” than in other vegetation types. For the species list for [Vascular Plants](#) follow the hyperlinks.
3. **Alpine Species** — species that depend on alpine habitat (as defined by Beckingham and Archibald 1996) for living/reproduction during the breeding season and have higher densities in alpine than in other vegetation types. For the species list for [Vascular Plants](#) follow the hyperlinks.
4. **Peatland Species** — species that depend on peatland bogs and fens (as defined by Beckingham and Archibald 1996) for living/reproduction during the breeding season and have higher densities

in peatlands than in other habitat types. For the species list for [Vascular Plants](#) follow the hyperlinks.

5. **Wetland species** — species that depend on wetlands (fen, marshes; base rich with higher nutrients) for living/reproduction during the breeding season and have higher densities in wetland than in other habitat types. For the species list for [Vascular Plants](#) follow the hyperlinks.
6. **Aquatic Species** — species that depend on wetlands/lakes and grow in standing water (anaerobic conditions) for living/reproduction during the breeding season and have higher densities in aquatic habitats than in other habitat types. For the species list for [Vascular Plants](#) follow the hyperlinks.
7. **Wet Habitat Generalist Species** — species that do not have a clear habitat type with maximum density during the breeding season, and that have relatively high density in at least 2 of the previous 4 habitat categories, and prefer wet-moist soil. For the species list for [Vascular Plants](#) follow the hyperlinks.
8. **Dry Habitat Generalist Species** — species that do not have a clear habitat type with maximum density during the breeding season, and that have relatively high density in at least 2 of the previous 4 habitat categories, and prefer dry-moist soil. For the species list for [Vascular Plants](#) follow the hyperlinks.
9. **Non-Native Species** — species that did not live/breed in the natural region prior to European settlement (Codes: 0=species native to the natural region, 1=species not native to North America prior to European settlement, and 9=species not native to Alberta but native to North America prior to European settlement (e.g., the Eastern gray squirrel)). For the species list for [Vascular Plants](#) follow the hyperlinks.

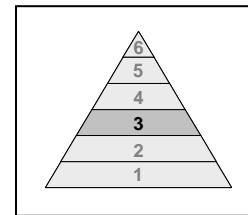

3.3.3 Broad Guilds — Bryophytes

1. **Forest Species** — species that depend on forests for living/reproduction and have higher densities in forest than in other vegetation types. For the species list for [Bryophytes](#) follow the hyperlinks.
2. **Grassland/Meadow Species** — species that depend on non-alpine upland terrestrial habitat dominated by vegetation <1 m in height for living/reproduction and have higher densities in “grassland” than in other vegetation types. For the species list for [Bryophytes](#) follow the hyperlinks.
3. **Alpine/Arctic Species** — species that depend on alpine habitat (as defined by Beckingham and Archibald 1996) or arctic habitats for living/reproduction and have higher densities in the alpine/arctic than in other vegetation types. For the species list for [Bryophytes](#) follow the hyperlinks.
4. **Peat-forming Wetland Species** — species of peat forming wetlands that depend on bogs (low nutrients, pH < 5) and fens (groundwater rich in mineral elements, ph >7) for living/reproduction and have higher densities in peat-forming wetland than in other habitat types. For the species list for [Bryophytes](#) follow the hyperlinks.
5. **Non-peat Forming Wetland Species** - Species of non-peat forming wetlands that depend on shallow open water, marsh, and swamps for living/reproduction and have higher densities in peat-forming wetland than in other habitat types. For the species list for [Bryophytes](#) follow the hyperlinks.
6. **Aquatic/Riparian/Littoral Species**— species that grow in standing water (lakes) or flowing water (rivers) and their immediate margins/shorelines for living/reproduction and have higher densities in aquatic habitats than in other habitat types. For the species list for [Bryophytes](#) follow the hyperlinks.

- 7. Habitat Generalist Species** — species that do not have a clear habitat type with maximum density during the breeding season, and that have relatively high density in at least 2 of the previous 4 habitat categories. For the species list for [Bryophytes](#) follow the hyperlinks.
- 8. Non-Native Species** — species that did not live/breed in the natural region prior to European settlement (Codes: 0=species native to the natural region, 1=species not native to North America prior to European settlement, and 9=species not native to Alberta but native to North America prior to European settlement (e.g., the Eastern gray squirrel)). For the species list for [Bryophytes](#) follow the hyperlinks.

3.4 Level 3

Level 3 describes the state of a group of species that share a characteristic (e.g., habitat, behavioural, or life-history). At this can reside in none, one, or more than one guild. Guilds in level 3 species and are restricted to the aggregation species from a single category (e.g., within vascular plants or within fish).

common
level, species
contain >5
taxonomic

Level 3 guilds used by the ABMI were determined based on their relevance to decision-makers and clearly do not include all possible guilds. Many are habitat based while some are based on other common characteristics such as life-history or their management concern. Species can be included in as many of the guilds as they belong to, but do not necessarily need to be included in any of the guilds. Species in habitat based guilds will only be included if they require the habitat for living/reproduction (i.e., simply using the habitat is not sufficient, they must require it).

Native and non-native species are included in the guilds but, within the ABMI's online information service, users will be asked whether they wish to analyze only native, or all species.

3.4.1 Mammals (Mammalia)

ABMI Guild Development Status: 3

Level 3 Mammal Guilds

- 1. Old-growth Forest:** Species requiring old-growth forests — defined as species that depend on forests > 80 years old for living/reproduction during the breeding season and have higher densities in old forest than in other vegetation type.
- 2. Early Seral:** Forest Species requiring early seral forests — defined as species that depend on forests (areas with trees) <20 years old for living/reproduction during the breeding season and have higher densities in young forest than in other vegetation types.
- 3. Forest Edge:** Specialists Forest edge species — defined as species that depend on the interface between forest and open habitat (where open habitat is terrestrial habitat such as agricultural and natural clearings and includes bogs and fens) during the breeding season, and have higher densities at forest edge than in other vegetation types.
- 4. Uncommon Species:** Species of Concern in Alberta — defined as Extirpated, At Risk, May be at Risk, or Sensitive, by Alberta Sustainable Resource Development.
- 5. High Responsibility:** Species for which Alberta has a high global responsibility — defined as species that had more than 10% of their breeding range in Alberta prior to European settlement.

6. **Human Modified Habitat**: Species associated with human modified habitats — defined as species that have higher densities in human modified habitats during the breeding season than in natural vegetation types.
7. **Riparian**: Riparian Specialists — defined as species that depend on riparian areas (terrestrial/aquatic edges of streams, rivers, marshes, bogs, ponds, and lakes) for living/foraging during the breeding season, and have higher densities in riparian areas than in other habitats.
8. **Cavity Nesting**: Cavity nesting species — defined as species that nest in tree cavities.
9. **Habitat Engineers**: — defined as species that create unique habitats structures (eg., cavities, burrows, kill trees, etc) that other species use. The modified habitat/structure must be used by many other taxa and be present for many years after it has been created.
10. **Irruptive Species**: Irruptive (cyclic) Species — defined as species that regularly fluctuate in density among years by more than 3-fold.
11. **Carnivorous Species**: Carnivores — defined as species that eat mainly vertebrates (includes picivores, carnivorous mammals, and birds of prey).
12. **Game Species**: — defined as species that are hunted, trapped, or fished for food or economic gain by humans.

5.4.2 Birds (Aves)

ABMI Guild Development Status: 3

Only species that live and breed in Alberta were included in these bird guilds. Thus, the guilds do not include species that are “Accidental/Vagrant” in the Alberta Rankings, or that were “SubSpecies”, or that simply migrated through Alberta.

Level 3 Bird Guilds

1. **Old-growth Forests***
2. **Forest Burns**: Species requiring regenerating forest burns — defined as species that depend on burned forest for living/reproduction during the breeding season and have higher densities in burned forest than in other vegetation types.
3. **Early Seral Forest***
4. **Interior Forest**: Interior forest species — defined as species that depend on large patches of forests for living/reproduction during the breeding season and have higher densities in the center of large forest patches than in other vegetation types, including the edge of forests
5. **Forest Edge Specialists**†
6. **Uncommon Species***
7. **High Responsibility***
8. **Human Modified Habitat***
9. **Riparian***
10. **Cavity Nesting***
11. **Habitat Engineers***
12. **Irruptive Species***
13. **Carnivorous Species***
14. **Game Species***
15. **Winter Residents**: — defined as birds that remain in Alberta during the winter, including species that remain in Alberta but that migrate from their breeding areas or those that may be nomadic in

* See 5.4.1 Mammal Guild for a definition

† See 5.4.1 Mammal Guild for a definition

the winter. Species that migrate from the Arctic to Alberta for the winter were included in this category.

16. **Neotropical Species**: — defined as birds that have >70% of their winter range in the neotropics (South America, Central America, Mexico, and the Caribbean).
17. **Short Distance Migrants**: — defined as birds that migrate to southern Canada, coastal Canada, or the USA for the winter.
18. **Cliff Species**: — species that depend on cliffs (rocky or mineral soil) or rocky outcrops (often along water courses) for living/reproduction during the breeding season and have higher densities on “cliffs” than in other habitat types.

5.4.2 Herptiles (Amphibia & Reptilia)

ABMI Guild Development Status: 2

Level 3 Herptiles Guilds*

19. **Uncommon Species***
20. **High Responsibility***
21. **Riparian***
22. **Carnivorous Species***

5.4.3 Vascular Plants (Magnoliopsida, Liliopsida, Pinopsida, Filicopsida, Equisetopsida, and Lycopodiopsida)

ABMI Guild Development Status: 3

Level 3 Vascular Plant Guilds*

1. **Old-growth Forest***
2. **Forest Burns***
3. **Early Seral***
4. **High Responsibility***
5. **Human Modified Habitat***
6. **Native Weedy Species**: — Species that are native to North America (and possibly Alberta) and considered noxious, invasive, or weedy in Alberta’s natural regions.
7. **Riparian***
8. **Form**— categories either forbs, ferns, graminoid, horsetails, shrubs, or trees.
9. **Nitrogen Fixers**: species that have mutualistic associations with nitrogen fixing bacteria in their roots or root nodules.
10. **Edible fruit producers**: species that produce fruits or seeds that generally are edible to both humans and animals.
11. **Fruit type** — categories either achene, berry, capsule, caryopsis, cone, drupe, follicle, nutlet, pod, schizocarp, or utricle
12. **Heterotrophs**: species that are saprophytes, parasites, or carnivores — plants that use means other than photosynthesis to subsist, either partially or completely.
13. **Nectar Producers**: Plants that were noted as important nectar-producing species for insects and/or birds by guidebooks.

* See 5.4.1 Mammal Guild for a definition

14. **Annuals/Biennials**: Species where individual plants live one or two years, completing their entire life cycle within that period
15. **Culturally Important — Construction & Crafts**: Plant species which were culturally important for native people for crafts, weaving and construction (i.e. shelters and canoes).
16. **Culturally Important — Food**: Plant species which were culturally important for native people for food
17. **Culturally Important — Medicine**: Plant species which were culturally important by native people as medicines and digestive aids.
18. Aquatic Forms: categories of aquatic growth form (aquatic plants only) emergent, floating, submergent.

5.4.4 Lichens (Ascomycetes)

ABMI Guild Development Status: 3

1. **Leaf Lichens**: Defined here as macrolichens (= chlorolichens) consisting of flattened, leaf-like lobes *and* containing a bright-green algal photopartner. Under a hand lens, the algal partner can be seen forming a thin green layer above the white inner portions of the lichen (= the medulla). Examples of leaf lichens include *Cetraria*, *Melanelia*, *Parmelia* and *Tuckermannopsis*.
2. **Gel Lichens**: Defined as macrolichens (= cyanolichens) consisting of flattened, leaf-like lobes *and* containing a dark greyish cyanobacterium as photopartner. Gel Lichens lack the white medulla of Leaf Lichens (above) and Felt Lichens (below), hence are uniformly dark throughout, as easily seen under a hand lens. When wet, most Gel Lichens are semi-translucent.
3. **Felt Lichens**: Defined here as macrolichens (= cyanolichens) consisting of flattened, leaf-like lobes *and* containing a dark greyish cyanobacterium as photopartner. Under a hand lens, the cyanobacterium forms a thin dark layer above the white inner portions of the lichen (= the medulla). Examples of Felt Lichen include *Nephroma*, *Peltigera*, *Solorina*. Some Felt Lichens have a green alga as *primary* photopartner, the cyanobacterium being confined to tiny gall-like outgrowths (= cephalodia). In all such cases, the lichen is easily recognized as a Felt Lichen by the presence of a thin nap of felt-like hairs located either over the lower surface (hand lens).
4. **Club or Shrub Lichens**: Defined as macrolichens with more or less cylindrical stems or branches. The stems are unbranched in the case of Club Lichens (*Baeomyces*, some *Cladonias*, *Thamnolia*, etc.), whereas Shrub Lichens (*Cladina*, some *Cladonias*, *Coelocaulon*, *Evernia*, etc.) have much-branched stems.
5. **Hair Lichens**: Defined as macrolichens with long slender branches of a hairlike appearance, e.g., *Alectoria*, *Bryoria*, *Ramalina (thrausta)*, *Usnea*.
6. **Old-growth Forest***
7. **Forest Burns*** (Includes only certain ground-dwelling lichens).
8. **Young Forest**: Lichens requiring early seral forests — defined as species that depend on forested habitats < 20–30 years old, or that have higher densities in young forests than in other vegetation types. Among the macrolichens, or certain ground-dwelling species belong here.
9. **Rocky Outcrop/Talus Specialist**: Ground-dwelling lichens requiring rocky outcrops — defined as species that depend on rocky substrates (including rock crevices) for living/reproduction, or at any rate that achieve higher densities in such habitats than in other habitat types.

* See 5.4.1 Mammal Guild for a definition

10. **Conifer/Birch Specialist**: Acid-demanding epiphytic lichens are usually restricted at boreal and subboreal latitudes to the bark or wood of standing conifers. Birch also generally has acidic bark (< pH 4–5), and so belongs here.
11. **Nutrient-enriched Conifers or Birches**: Nutrient-demanding lichens in northern forests are often restricted to the branches of trees subject to localized nutrient enrichment. Common nutrient sources include uptake of calcium from old lake sediments, exposure to calcareous dust, or dripzone leachates from nearby deciduous trees (see below). To qualify as nutrient-enriched, bark pH should be above 5–6.
12. **Deciduous Trees and Shrubs (except Birches)**: Deciduous trees and shrubs provide critical habitat for certain nutrient-demanding lichens. In some situations, leachates from deciduous trees can enrich the lower branches of conifers, thereby facilitating the establishment of lichens otherwise not likely to occur in a particular region.
13. **Stumps, Logs, or Tip-up Mounds**: In boreal ecosystems subject to deep winter snow, decaying wood elevates snow-sensitive lichens above the zone of maximal burial by the winter snowpack. Such woody structures are particularly important for lichens dependent exclusively or predominantly on decaying wood.
14. **Human-modified**^{*} (Note that forest cutting is handled under Early Seral above)
15. **On Limestone or other Calcium-rich Rock**: Limestones and other rocks containing calcium carbonate support a small but essentially exclusive array of macrolichens including *Collema*, *Physcia*, *Physconia*, and *Xanthoria*. Applying a drop of hydrochloric acid (HCl) to such rocks causes them to fizz.
16. **On Granites or other Silica-rich Rock**: Acid rock supports a wide range of macrolichens, contributing significantly to total macrolichen diversity in some regions. Common genera include *Melanelia*, *Stereocaulon*, *Umbilicaria* and *Xanthoparmelia*. Siliceous rocks do not fizz with hydrochloric acid.
17. **On Calcium-rich Soil**: Most common on soil with a pH above about 6–7.
18. **On Acid Soil**: Most common on soil or humus with a pH below about 4–5.
19. **VIP wildlife**: Defined as lichens used by wildlife for food, shelter, nesting material, etc.
20. **Culturally Important**: Refers to lichens that have been used by humans either in the past or down to present time.
21. **Uncommon Species**^{*}
22. **High Responsibility**^{*}
23. **Wetland Forest Lichens**: Lichens requiring wetland forests — defined as species that depend on forests either containing small wetland patches or adjacent to wetlands. (Note: wetlands increase ambient air humidity in their vicinity, hence promote nighttime mist and dew, both of which in turn favour colonization by certain lichens).
24. **Riverine Forest Lichens**: Lichens dependent on certain chemical and microclimatic attributes of streamside localities — defined as species that depend on or are most abundant in forests in the immediate vicinity of fast-moving water.
25. **Dispersal Limited**: Refers primarily to lichens with poor powers of dispersal owing to reliance on large diaspores, but also includes certain species that establish with difficulty in Alberta, owing, e.g., to lack of suitable habitat or climatic conditions.
26. **Vulnerable to Snow Cover**: Included here are ground-dwelling lichens unable to establish or persist in localities subject to continuous deep snow cover (> 30 cm) for more than a few weeks each year.

* See 5.4.1 Mammal Guild for a definition

27. **Vulnerable to Trampling**: Refers primarily to soil-dwelling lichens of limited occurrence in Alberta.
28. **Vulnerable to Industrial Air Pollution**: Included here are lichens intolerant of exposure to sulphur oxides or other gaseous byproducts of industrial processing, e.g., oil refineries.
29. **Vulnerable to Agricultural Air Pollution**: Belonging here are lichens vulnerable to changes in atmospheric chemistry as a result of aerosols from agricultural activities, e.g., certain pesticides, ammonia from feedlots.

5.4.5 Bryophytes (Bryopsida & Hepatopsida)

ABMI Guild Development Status: 3

1. **Old-growth Forest***
2. **Forest Burns***
3. **Young Forest***
4. **Uncommon Species***
5. **High Responsibility***
6. **Human-modified***
7. **Stumps, Logs, or Tip-up Mounds**†
8. **Prolonged Drought Sensitive**: Species which are not adapted to survive prolonged drought conditions.
9. **Epiphytic**: Epiphytic or bark growing bryophytes (on trees alone), not including tree bases, that have higher frequency on these substrates than on other substrates types.
10. **Grows on Tree Bases**: Bryophytes growing on tree bases for living/reproduction and that have higher frequency on these substrates than on other substrates types.
11. **Low productivity Specialists**: Species that predominant low productivity areas (low nutrients) for living/reproduction and that have higher frequency in these habitats than in other habitat types
12. **Terrestrial Riparian/Littoral Habitat**: Species that dominant riparian/littoral areas (terrestrial/aquatic edges of streams, rivers, marshes, bogs, ponds, and lakes) for living/reproduction, and that have higher frequency in riparian areas than in other vegetation types (i.e., within 10m of flowing or standing water).
13. **Calcium Rich/Base Substrates**: Species requiring calcium rich substrates (soil and rocks) – defined as species that depend on calcium rich, alkaline substrates ($\text{pH} \geq 7.5$) for living/reproduction and that have higher frequency on these substrates than on other substrates types.
14. **Acid/Granitic Substrates**: Species requiring acidic soils and rocks – defined as species that depend on acid soils/rocks ($\text{pH} \leq 7$) for living/reproduction and that have higher frequency on these substrates than on other substrates types.
15. **Rich organic substrates**: Species requiring rich organic substrates (animal remains, dung, and feces) for living/reproduction and that have higher frequency on these substrates than on other substrates types.
16. **Shade Intolerant**: Species that do not tolerate shade.

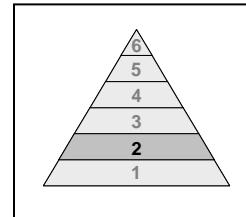

* See 5.4.1 Mammal Guild for a definition

† See 5.4.4 Lichen Guild for a definition

- 17. Rocky Outcrops/Cliffs/Talus Slopes:** Species which grow predominantly on rocky outcrops, cliffs, or talus slopes – defined as species that depend on rocky substrates for living/reproduction and that have higher frequency in these habitats than in other habitat types.
- 18. Sensitive to Pollution:** Bryophyte species which are intolerant of exposure to sulphur oxides or other gaseous byproducts of industrial processing (e.g., oil refineries) or to changes in atmospheric chemistry as a result of aerosols from agricultural activities (e.g. certain pesticides, ammonia from feedlots).

5.5 Level 2

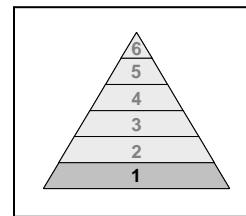

Level 2 is composed of indices that describe the state of individual species. An index value is calculated for every species that is detected at >10 sites within a natural region. See ABMI (2008) for a description of how species indices are calculated. Supporting data for Level 2 can be found in Level 1.

Level 2 indices form the foundation for index development in levels 3, 4, and 5. The relationship between indices in Level 2 and indices above is not strictly hierarchical as data from level 2 feeds directly into Levels 3, 4, and 5.

5.6 Level 1

Level 1 is made up of raw data and basic species metrics including: raw data in the form of spread sheets and range maps are provided for each species

Aquatic/Wetland

American Wigeon (*Anas americana*)
 Barrow's Goldeneye (*Bucephala islandica*)
 Blue-winged Teal (*Anas discors*)
 Bufflehead (*Bucephala albeola*)
 Canada Goose (*Branta canadensis*)
 Canvasback (*Aythya valisineria*)
 Common Goldeneye (*Bucephala clangula*)
 Gadwall (*Anas strepera*)
 Hooded Merganser (*Lophodytes cucullatus*)
 Lesser Scaup (*Aythya affinis*)
 Mallard (*Anas platyrhynchos*)
 Northern Pintail (*Anas acuta*)
 Northern Shoveler (*Anas clypeata*)
 Redhead (*Aythya americana*)
 Ring-Necked Duck (*Aythya collaris*)
 Ruddy Duck (*Oxyura jamaicensis*)
 Surf Scoter (*Melanitta perspicillata*)
 American Avocet (*Recurvirostra americana*)
 Black Tern (*Chlidonias niger*)
 Bonaparte's Gull (*Larus philadelphia*)
 Common Tern (*Sterna hirundo*)
 Franklin's Gull (*Larus pipixcan*)
 Greater Yellowlegs (*Tringa melanoleuca*)
 Lesser Yellowlegs (*Tringa flavipes*)
 Mew Gull (*Larus canus*)
 Solitary Sandpiper (*Tringa solitaria*)
 Spotted Sandpiper (*Actitis macularia*)
 Willet (*Catoptrophorus semipalmatus*)
 Wilson's (Common) Snipe (*Gallinago delicata*)
 Wilson's Phalarope (*Phalaropus tricolor*)
 American Bittern (*Botaurus lentiginosus*)
 Great Blue Heron (*Ardea herodias*)
 Belted Kingfisher (*Ceryle alcyon*)
 Bald Eagle (*Haliaeetus leucocephalus*)
 Osprey (*Pandion haliaetus*)
 Common Loon (*Gavia immer*)
 American Coot (*Fulica americana*)
 Sandhill Crane (*Grus canadensis*)
 Sora (*Porzana carolina*)
 Red-winged Blackbird (*Agelaius phoeniceus*)
 Bank Swallow (*Riparia riparia*)
 Brewer's Blackbird (*Euphagus cyanocephalus*)
 Cliff Swallow (*Petrochelidon pyrrhonota*)
 Common Yellowthroat (*Geothlypis trichas*)
 Lincoln's Sparrow (*Melospiza lincolni*)
 Marsh Wren (*Cistothorus palustris*)
 Nelson's Sharp-Tailed Sparrow (*Ammodramus nelsoni*)
 Northern Rough-Winged Swallow (*Stelgidopteryx serripennis*)
 Rusty Blackbird (*Euphagus carolinus*)

Sprague's Pipit (*Anthus spragueii*)

Swamp Sparrow (*Melospiza georgiana*)
 Yellow-Headed Blackbird (*Xanthocephalus xanthocephalus*)
 American White Pelican (*Pelecanus erythrorynchos*)
 Double-Crested Cormorant (*Phalacrocorax auritus*)
 Eared Grebe (*Podiceps nigricollis*)
 Pied-Billed Grebe (*Podilymbus podiceps*)
 Red-Necked Grebe (*Podiceps grisegena*)
 Western Grebe (*Aechmophorus occidentalis*)

Habitat Generalist

Ruby-Throated Hummingbird (*Archilochus colubris*)
 Common Nighthawk (*Chordeiles minor*)
 California Gull (*Larus californicus*)
 Ring-Billed Gull (*Larus delawarensis*)
 Mourning Dove (*Zenaida macroura*)
 Merlin (*Falco columbarius*)
 Red-Tailed Hawk (*Buteo jamaicensis*)
 Herring Gull (*Larus argentatus*)
 American Crow (*Corvus brachyrhynchos*)
 American Robin (*Turdus migratorius*)
 Barn Swallow (*Hirundo rustica*)
 Black-Billed Magpie (*Pica hudsonia*)
 Common Raven (*Corvus corax*)
 Eastern Kingbird (*Tyrannus tyrannus*)
 House Wren (*Troglodytes aedon*)

Non-Native

Rock Dove (*Columba livia*)
 European Starling (*Sturnus vulgaris*)
 Domestic Chicken (*Gallus gallus*)

Appendix 2b — Birds Guild Membership (Level 3)

Old-growth Forest

Broad-winged Hawk (*Buteo platypterus*)
 Baltimore (Northern) Oriole (*Icterus galbula*)
 Bay-breasted Warbler (*Dendroica castanea*)
 Blackpoll Warbler (*Dendroica striata*)
 Black-Throated Green Warbler (*Dendroica virens*)
 Blue-Headed (Solitary) Vireo (*Vireo solitarius*)
 Boreal Chickadee (*Poecile hudsonica*)
 Brown Creeper (*Certhia americana*)
 Cape May Warbler (*Dendroica tigrina*)
 Evening Grosbeak (*Coccothraustes vespertinus*)
 Golden-Crowned Kinglet (*Regulus satrapa*)
 Hammond's Flycatcher (*Empidonax hammondi*)
 Least Flycatcher (*Empidonax minimus*)
 Magnolia Warbler (*Dendroica magnolia*)
 Northern Waterthrush (*Seiurus noveboracensis*)
 Philadelphia Vireo (*Vireo philadelphicus*)
 Pine Siskin (*Carduelis pinus*)
 Purple Finch (*Carpodacus purpureus*)
 Red Crossbill (*Loxia curvirostra*)
 Red-Breasted Nuthatch (*Sitta canadensis*)
 Rose-Breasted Grosbeak (*Pheucticus ludovicianus*)
 Ruby-Crowned Kinglet (*Regulus calendula*)
 Swainson's Thrush (*Catharus ustulatus*)
 Varied Thrush (*Ixoreus naevius*)
 Warbling Vireo (*Vireo gilvus*)
 Western Tanager (*Piranga ludoviciana*)
 White-Breasted Nuthatch (*Sitta carolinensis*)

Brassica napus
Brassica rapa
Capsella bursa-pastoris
Caragana arborescens
Cardamine pensylvanica

Dalea purpurea

Dalea purpurea var. *purpurea*
Descurainia sophia
Erysimum cheiranthoides
Erysimum inconspicuum
Glycyrrhiza lepidota
Hedysarum alpinum
Hedysarum boreale
Hedysarum sulphurescens
Lathyrus ochroleucus
Lathyrus palustris
Lathyrus venosus
Lepidium densiflorum
Medicago lupulina
Medicago sativa
*Melilotus alba**
Menziesia ferruginea
Neslia paniculata
Onobrychis viciifolia
Oxytropis deflexa
Oxytropis monticola
Oxytropis sericea
Oxytropis splendens
*Psoralea argophylla**
Rorippa palustris
Sisymbrium altissimum
Thermopsis rhombifolia
Thlaspi arvense
Tiarella trifoliata
Trifolium hybridum
Trifolium pratense
Trifolium repens
Vicia americana
Vicia cracca
Lupinus pusillus
Lupinus sericeus
Sorbus aucuparia
Sorbus scopulina

Fruit type — schizocarp

Angelica dawsonii
Angelica genuflexa
Callitriches hermaphroditica
Carum carvi
Cicuta bulbifera
Cicuta maculata
Heracleum maximum
Malva rotundifolia
Osmorrhiza depauperata
Osmorrhiza longistylis
Pastinaca sativa
Sanicula marilandica
Sium suave

Fruit type — utricles

Amaranthus albus
Amaranthus retroflexus
Atriplex nuttallii
Axyris amaranthoides
Eurotia lanata
Kochia scoparia
Lemna minor
Lemna trisulca
Lemna turionifera
Monolepis nuttalliana
Paronychia sessiliflora
Spirodela polyrhiza

Heterotrophs

Castilleja hispida
Castilleja miniata
Castilleja occidentalis
Castilleja raupii
Comarum palustre
Corallorrhiza maculata
Corallorrhiza striata
Corallorrhiza trifida
Cypripedium acaule
Drosera anglica
Drosera rotundifolia
Geocaulon lividum
Monotropa uniflora
Pedicularis bracteosa
Pedicularis groenlandica
Pedicularis labradorica
Pedicularis parviflora
Rhinanthus borealis
Sarracenia purpurea
Utricularia intermedia
Utricularia minor
Utricularia vulgaris

Nectar Producers

Achillea millefolium
Achillea sibirica
Aconitum delphiniiifolium
Agastache foeniculum
Agoseris glauca
Agrimonia striata
Alisma gramineum
Alisma triviale
Allium cernuum
Allium textile
Amelanchier alnifolia
Amerorchis rotundifolia
Androsace occidentalis

Appendix 4b — Vascular Plant Guild Membership (Level 3) con't

Nectar Producers (cont'd)

Androsace septentrionalis
Anemone riparia
Angelica dawsonii
Angelica genuflexa
Apocynum androsaemifolium
Aquilegia brevistyla
Arabis hirsuta
Arceuthobium americanum
Arctium minus
Arctostaphylos rubra
Arctostaphylos uva-ursi
Arnica angustifolia
Arnica chamissonis
Arnica cordifolia
Arnica lonchophylla
Artemisia campestris
Asclepias ovalifolia
*Aster ascendens**
Aster borealis
Aster brachyactis
Aster ciliolatus
Aster conspicuus
Aster ericoides
Aster hesperius
Aster laevis
Aster modestus
Aster puniceus
Aster umbellatus
Astragalus alpinus
Astragalus americanus
Astragalus australis
Astragalus bodinii
Astragalus canadensis
*Astragalus dasycnemus**
Astragalus drummondii
Astragalus eucosmus
Astragalus flexuosus
Astragalus laxmannii
Astragalus miser
Astragalus pectinatus
Astragalus purshii
Astragalus vexilliflexus
Barbarea orthocera
Bidens cernua
Brassica kaber
Brassica napus
Brassica rapa
Calla palustris
Caltha natans
Caltha palustris
Calypso bulbosa
Camelina microcarpa

Campanula rotundifolia
Capsella bursa-pastoris
Cardamine pensylvanica
Carum carvi
Cassiope tetragona
Castilleja hispida
Castilleja miniata
Castilleja occidentalis
Castilleja raupii
Cerastium arvense
Cerastium nutans
Cerastium vulgatum
Ceratophyllum demersum
Chamaerhodos erecta
Chrysanthemum leucanthemum
Chrysosplenium tetrandrum
Cicuta bulbifera
Cicuta maculata
Circaea alpina
Cirsium arvense
Cirsium drummondii
Cirsium flodmanii
Cirsium hookerianum
Cirsium undulatum
Cirsium vulgare
Clematis occidentalis
Coeloglossum viride
Comandra umbellata
Comarum palustre
Coptis trifolia
Corallorrhiza maculata
Corallorrhiza striata
Corallorrhiza trifida
Corydalis aurea
Corylus cornuta
*Coryphantha vivipara**
Crepis runcinata
Crepis tectorum
Cynoglossum officinale
Cypripedium acaule
Cypripedium passerinum
Dalea purpurea
Dalea purpurea var. purpurea
Delphinium glaucum
Descurainia sophia
Diervilla lonicera
Disporum trachycarpum
Dodecatheon conjugens
Dodecatheon pulchellum
Dracocephalum parviflorum
Drosera anglica
Drosera rotundifolia
Dryas drummondii

Elaeagnus commutata
Empetrum nigrum
Epilobium angustifolium
Epilobium ciliatum
Epilobium glaberrimum
Epilobium hornemannii
Epilobium leptocarpum
Epilobium leptophyllum
Epilobium palustre
Erigeron acris
Erigeron caespitosus
Erigeron elatus
Erigeron glabellus
Erigeron philadelphicus
Erigeron pumilus
Erigeron speciosus
Eriogonum flavum
Erysimum cheiranthoides
Erysimum inconspicuum
Euphorbia esula
Fragaria vesca
Fragaria virginiana
Gaillardia aristata
Galeopsis tetrahit
Galium aparine
Galium boreale
Galium labradoricum
Galium trifidum
Galium triflorum
Gaultheria hispidula
Gaura coccinea
Gentianella amarella
Geocaulon lividum
Geranium bicknellii
Geranium richardsonii
Geranium viscosissimum
Geum aleppicum
Geum macrophyllum
Geum rivale
Geum triflorum
Glycyrrhiza lepidota
Gnaphalium palustre
Gnaphalium uliginosum
Goodyera repens
Grindelia squarrosa
Gutierrezia sarothrae
Gypsophila paniculata
Hackelia jessicae
Halenia deflexa
Hedeoma hispida
Hedysarum alpinum
Hedysarum boreale
Hedysarum sulphurescens

Appendix 7 — Resources Used To Develop ABMI Guilds

Related and Supporting Resources for Mammals and Birds

Species Identification

NatureServe Code — From the NatureServe web site (<http://www.natureserve.org/getData/animalData.jsp>).

Missing species (eg. domestic and introduced species) given a number so they fit where they belonged taxonomically in the NatureServe list.

Class — from the NatureServe web site <http://www.natureserve.org/getData/animalData.jsp>.

Classes for species not included by NatureServe were determined from Godfrey 1986, Semenchuk 1992, Banfield 1974, Pattie and Hoffmann 1992, Russell and Bauer 1993, Smith 1993, plus the internet for species not present in the reference guides.

Order — same sources as that for Class.

Family — same sources as that for Class.

Scientific Name — Same sources as that for Class.

Common Name — From Alberta Sustainable Resource Development 2000.

Common names for species not included in Alberta Sustainable Resource Development 2000 were determined for birds from Godfrey 1986, Semenchuk 1992, for mammals from Banfield 1974, Pattie and Hoffmann 1992, and Smith 1993, and for amphibians and reptiles from Russell and Bauer 1993. Names from the internet were used for species that were not present in the reference guides.

Species Code — 4-letter code consisting of the first letters from the species “Common” name.

Where possible species codes for birds follow the American Ornithologists’ Union (<http://www.aou.org/resources/>).

Alberta Status — From Alberta Sustainable Resource Development 2000.

Introduced species that were not included in General Status of Alberta Wild Species 2000 were classified as exotic. Three species (Wood Duck, Eurasian Wigeon, House Finch) were classified incorrectly by Alberta Sustainable Resource Development 2000 — these species were classified exotic in the database.

Natural Regions In Which The Species Breeds — Species were classified as 1 for present through natural region, and 9 for present in only a small portion of the regions Shield, Boreal, Mountains, Foothills, Parkland, Grassland in Alberta. Classification was based on information for birds from Godfrey 1986, Semenchuk 1992, for mammals from Banfield 1974, Pattie and Hoffmann 1992, and Smith 1993, and for amphibians and reptiles from Russell and Bauer 1993.

Guilds Based On General Habitat Use

Forest Specialists — Classified based on information on birds from Bellrose 1980, Godfrey 1986, Semenchuk 1992, Gauthier and Aubry 1996, Campbell et al. 1990a, 1990b, 1997, 2001, for mammals from Banfield 1974, Pattie and Hoffmann 1992, Smith 1993, and for amphibians and reptiles from Nussbaum et al. 1983, Russell and Bauer 1993. This information was supplemented by information in Alberta Sustainable Resource Development 2000, and information in the NatureServe web site (<http://www.natureserve.org/explorer/servlet/NatureServe?init=Species>).

Grassland Specialists — The same information sources as used that for Forest Specialists.

Alpine Specialists — The same information sources as used that for Forest Specialists.

Bog Specialists — The same information sources as used that for Forest Specialists.

Wetland/Aquatic Specialists — The same information sources as used that for Forest Specialists.

Generalists Specialists — The same information sources as used that for Forest Specialists.

Exotic Species — The same information sources as used that for the Natural Regions Classification.

Guilds Based On Use Of Specific Habitat Characteristics

Old Forest Specialists — The same information sources as used that for Forest Specialists.

Forest Burn Specialists — The same information sources as used that for Forest Specialists.

Young Forest Specialists — The same information sources as used that for Forest Specialists.

Interior Forest Specialists — The same information sources as used that for Forest Specialists, plus Freemark and Collins 1991.

Forest Edge Specialists — The same information sources as used that for Forest Specialists, plus Freemark and Collins 1991.

Cavity Nesting Species — The same information sources as used that for Forest Specialists.

Guilds Based On Use Of Wetland Characteristics

Wetland Specialists — The same information sources as used that for Forest Specialists.

Aquatic Specialists — The same information sources as used that for Forest Specialists.

Guilds Based On Migratory Behavior

Neotropical Migrant — Based on information from Environment Canada's web site (<http://map.on.ec.gc.ca/wildspace/hemi-ims.html>) with supplementation from the NatureServe web site (<http://www.natureserve.org/explorer/servlet/NatureServe?init=Species>) for information was not presented by Environment Canada.

Short-Distance Migrant — The same information sources as used that for Neotropical Migrants.

Winter Resident — Based on information on birds from Godfrey 1986, Semenchuk 1992, for mammals from Banfield 1974, Smith 1993, and Pattie and Hoffmann 1992, and for amphibians and reptiles from Russell and Bauer 1993.

Cliff Specialists — The same information sources as used that for Forest Specialists.

Riparian Specialists — The same information sources as used that for Forest Specialists.

Human Associated Species — The same information sources as used that for Forest Specialists.

Irruptive (Cyclic) Species — Based on information from Boutin et al. 1995, with supplementation from Bellrose 1980, Godfrey 1986, Semenchuk 1992, Gauthier and Aubry 1996, Campbell et al. 1990a, 1990b, 1997, 2001, for mammals from Banfield 1974, Pattie and Hoffmann 1992, Smith 1993, and for amphibians and reptiles from Nussbaum et al. 1983, Russell and Bauer 1993.

Habitat Engineers — The same information sources as used that for Forest Specialists.

Carnivores — The same information sources as used that for Forest Specialists.

Game Species — The same information sources as used that for Forest Specialists.

Species Of Management Concern in Alberta — The same information sources as used that for Alberta Status.

Species That Alberta Has A High Responsibility For — Based on information for birds from Environment Canada's web site <http://map.on.ec.gc.ca/wildspace/hemi-ims.html> plus and Godfrey 1986, Semenchuk 1992, mammals from Banfield 1974, Pattie and Hoffmann 1992, and Smith 1993, and amphibians and reptiles from Russell and Bauer 1993. If information was not available from these primary sources, then NatureServe web site (<http://www.natureserve.org/explorer/servlet/NatureServe?init=Species>) was used.

Appendix 8 — Taxonomic Breadth in the ABMI

The Alberta Biodiversity Monitoring Program was designed to capture change in species from many different taxonomic groups, with a wide range of terrestrial habitat requirements, from a variety of trophic levels, and from a diversity of life history strategies and life spans. Listed below are the taxonomic groups (Class) for which 10 or more species are being monitored by the ABMI. Currently, the ABMI collects data on more than 10 species in at least 20 different classes (taxonomic source-www.itis.usda.gov):

- Magnoliopsida (Dicotyledons)
- Liliopsida (Monocotyledons)
- Pinopsida (Pines)
- Filicopsida (Ferns)
- Equisetopsida (Horsetails)
- Bryopsida (true mosses)
- Sphagnopsida (peat mosses)
- Hepatopsida (liverworts)
- Ascomycetes (lichen)
- Basidiomycetes (polyporous fungi)
- Chlorophyceae (green algae — aquatic streams)
- Insecta (caddisflies, stoneflies — aquatic streams)
- Maxillopoda (copepods — aquatic wetlands)
- Eurotatoria (rotifers — aquatic wetlands)
- Entognatha (springtails)
- Arachnida (mites)
- Branchiopoda (brine shrimp, fairy shrimp — aquatic wetlands)
- Osteichthyes (fish)
- Aves (birds)
- Mammalia (mammals)
